Water Table Contours

Legend

-  Downtown Overlay District
-  Groundwater Contours

This data set consists of digital contours that represent the water-table altitude for Long Island, New York region. The U.S. Geological Survey constructed a water-table map of the Long Island area using ground-water levels measured during the spring of 2006. Water-level data were collected from 341 wells to construct the contours at a map scale of 1:125,000.
