

PROJECT APPLICANT: Village of Southampton

PROJECT TITLE: Village of Southampton A/I Septic System

PROJECT TYPE: Wastewater Treatment Improvement Project

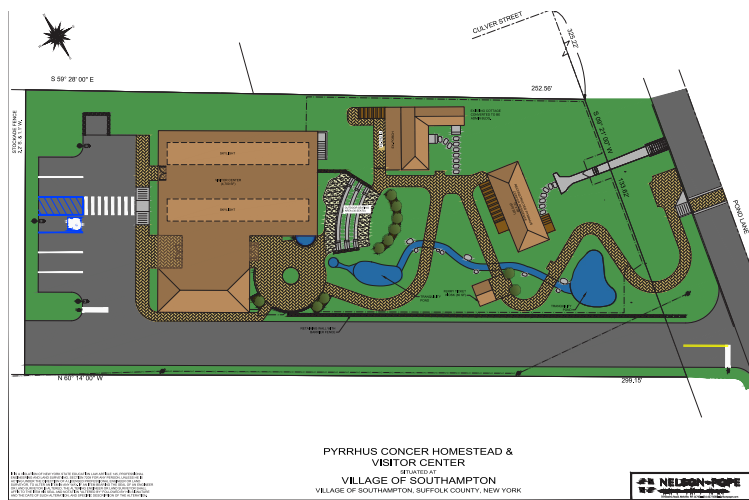

SCALE: Neighborhood/Watershed

APPROACH: Reduction

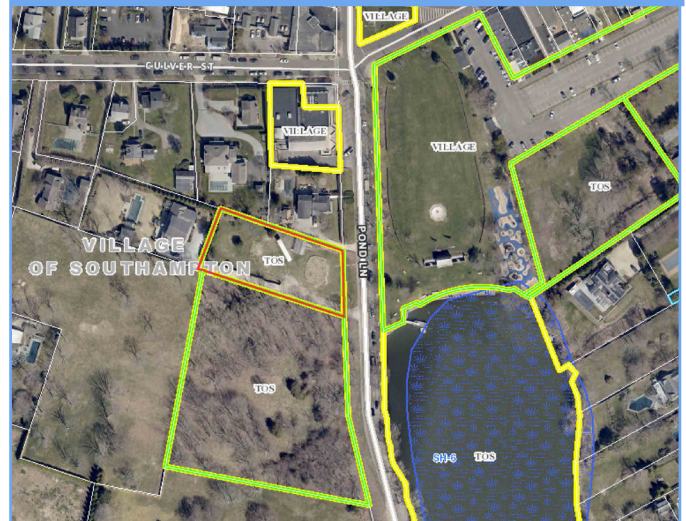

DESCRIPTION:

The Village of Southampton is reconstructing the Pyrrhus Concer homestead located at 51 Pond Lane. The current project under review includes reconstructing the Concer house, preserving the one story cottage for administrative and museum purposes, constructing a visitor center, adding a parking lot, driveway, landscaping, sidewalks, and tranquility ponds. The Village of Southampton seeks funding to install an Innovative Alternative Onsite Wastewater Treatment System (I/A OWTS) on the property as the sanitary system. Although currently no septic is installed on site, it is estimated that the I/A OWTS would reduce nitrogen by 84.02 lbs. per year compared to a conventional system.
